Precession: turn it one way, lean the other

Excerpt from How the Gyro-X Balances

Simplified teaching drawing, not to scale. Our own work, labelled only with sourced facts.

Turning a spinning flywheel produces a push at right angles to the turn, called gyroscopic precession. So turning the Gyro-X's flywheel to the left made the car lean to the left, and turning it right made it lean right. OCTANE, 2026

A tilt sensor and control system kept adjusting the flywheel, like a tightrope walker with a pole, to hold the car upright. Fed with speed and steering, it could also lean the car into corners like a motorcyclist. OCTANE, 2026

Not a Ford. Alex Tremulis worked on the Ford Gyron concept of 1961 while at Ford, but the Gyro-X of 1967 was built by Gyro Transport Systems of Ridgecrest, California, from his and Thomas Summers's ideas. OCTANE, 2026 LANE MUSEUM

SAMPLE CARD

Starting the Gyro-X

Excerpt from How the Gyro-X Balances

1. **Choke and key** then a steady 2,000 rpm idle. OCTANE, 2026
2. **Control system on, then gyro on** OCTANE, 2026
3. **Wait about five minutes** for 3,000 rpm, about 400 psi and oil at 50 °C. OCTANE, 2026
4. **Park mode, raise the parking wheels** until the dash light turns green. OCTANE, 2026
5. **First gear, drive mode, pull away** OCTANE, 2026

Octane found that when everything goes smoothly it tracks straight, stays bolt upright and leans smoothly into corners, but gusts, bumps and sudden inputs bring twitches, lurches and wobbles. OCTANE, 2026

OUR DRAWINGS

All drawings, charts, cards and layouts are REALLYBYTE's own work. Technical drawings are simplified teaching drawings, not to scale and not copied from any maker's drawing, unless a page says it is drawn to published dimensions. Calculations marked OUR MATHS are ours, worked from the sourced figures shown.

WHERE THE FACTS COME FROM (CHECKED 9 NOVEMBER 2026)

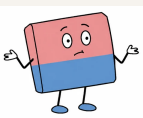

Every fact in this pack was written in our own words and checked against the source pages below on 9 November 2026; the small red labels in the text show which source each fact comes from. Where good sources disagree, we show each one rather than picking a winner. Things that can change, such as where a vehicle is displayed or museum opening details, are given with that date: check before you travel.
